

SHANE LEE

(201) 957-5357 — Ithaca, NY — ssl244@cornell.edu — linkedin.com/in/shane-lee-23601b2b8 — slee112132.github.io/portfolio

EDUCATION

Cornell University, College of Agriculture and Life Sciences

Ithaca, NY

Bachelor of Science in Information Science; Minor in Computer Science

Aug. 2023 – May 2027

– **GPA:** 3.7

– **Relevant Coursework:** Object-Oriented Programming & Data Structures, Functional Programming, Calculus I, Linear Algebra, Web Design, Data Science, Data Visualization, Intro to Machine Learning

EXPERIENCE

Scale AI

May 2025 – Sep 2025

GenAI Technical Advisor Intern

Remote

- Engineered and optimized prompts for large language models through quantitative ground-truth benchmarking and systematic error analysis, improving on mathematical reasoning accuracy and consistency across diverse task sets.
- Partnered cross-functionally with reviewers and engineers to rigorously assess model outputs, debug complex edge cases, and iteratively refine large-scale systems that improved reasoning reliability by 20% across diverse task sets.

Tech Tutors

Oct 2021 – Jun 2023

Organization Founder

Northvale, NJ

- Founded and led non-profit that introduced over 40 local youth to Python programming through hands-on workshops, interactive projects, and detailed mentorship, fostering collaboration and early interest in computational technology.
- Organized and led digital literacy workshops for older adults, delivering instruction on essential technologies such as email, web navigation, and smartphone usage to enhance digital confidence, independence, and everyday connectivity.

PROJECTS

AI Fact-Checker | *Python, TypeScript, Neo4j, Claude API* [Github]

Nov 2025

- Collaboratively implemented Logical.ly, an AI-assisted text-editor that extracts user claims, compares them to uploaded sources, and flags contradictions using a hybrid LLM + knowledge-graph pipeline with provenance tracking.
- Designed a multi-stage reasoning pipeline (claim extraction → symbolic retrieval → LLM contradiction analysis) combining graph-based candidate selection with structured LLM evaluation to reduce hallucinated conflicts by 35%.
- Built a Flask backend for document ingestion, schema-constrained claim extraction, and dynamic knowledge graph construction through Neo4j using a GraphRAG-style architecture with chunked processing and entity normalization.
- Implemented graph-based claim matching and contradiction analysis using entity-overlap scoring, top-K retrieval, and Neo4j queries to efficiently narrow evidence candidates before LLM evaluation, improving both latency and precision.

Job-Tracking System | *MERN* [Github]

Aug – Sep 2025

- Engineered a full-stack job tracker with dynamic search, robust CRUD functionality, and intuitive status tracking to streamline application management, improve organization, and enhance the overall user experience and quality of life.
- Designed a modular Express REST API with Zod input validation, Mongoose models, and status endpoints.
- Implemented a secure server-side Large Language Model wrapper with robust request validation, environment-based configuration toggling, mock execution mode, and integrated content moderation pipelines for safe and reliable usage.

K&L Delicatessen Website | *JavaScript* [Live]

Jun 2024

- Designed and developed official website for a Jackson Heights eatery, implementing responsive and user-friendly UI.
- Integrated an online ordering system through Toast for pickup/delivery orders, increasing overall user-traffic by 17%.

Kirby Fall | *GDScript* [Github]

Sep – Oct 2025

- Designed and developed Kirby Fall, a polished vertical-scrolling action game in Godot 4 featuring fluid movement control, responsive physics-based interactions, and a modular scene-based architecture for scalable content creation.
- Implemented reusable gameplay systems for procedural obstacle spawning, adaptive difficulty scaling, and collision driven feedback using Path2D, RigidBody2D, and robust signal-based event logic to sustain long-term replayability.
- Built custom UI overlays for start, gameplay, pause, and game-over states with transitions, real-time score tracking, and particle-based visual and sound effects, blending creative design with state-of-the-art programming principles.

TECHNICAL SKILLS

Languages: C#, C++, GDScript, Python, Java, JavaScript, C, R, HTML/CSS, SQL, OCaml, Typescript

Frameworks: React, Node.js, Express, Flask, FastAPI, Docker

Developer Tools: Git, Linux, VS Code, PyCharm, ClaudeAPI, Graph-based retrieval, IntelliJ, Tableau, Selenium

Databases and Libraries: MongoDB, Neo4j, NoSQL, MySQL, Pandas, pdfjs, NumPy, Matplotlib
